

CLIMATE CHANGE THINK TANK: PRELIMINARY ANNOUNCEMENT

Adaptation and mitigation in Victorian drylands

8-9 April 2010

Grains Innovation Park, Horsham, Victoria

The Victorian Centre for Climate Change Adaptation Research, the University of Ballarat and WIDCORP (Water in Drylands Collaborative Research Program) are pleased to announce a free workshop on

Adaptation and mitigation actions to drive positive change in natural resource management (NRM) in Victorian drylands

The think tank will focus on the potential climate change impacts and adaptation options associated with NRM in northern Victoria. It will bring together regional, national and international climate change adaptation research as it relates to NRM and land use change.

Presenters will include:

Professor Rob Wilby is Professor of Hydroclimatic Modelling, Loughborough University, UK. He uses his experience in industry, government, consultancy and academia in applied research on climate variability and change in relation to the management of freshwater environments.

Professor Rod Keenan is the Director of the Victorian Centre for Climate Change Adaptation Research, which aims to improve understanding in government and the community about the potential impacts of climate change and adaptation options.

Victorian and regional experts in resilience, land-use and transformational change including representatives from DPI, DSE, BOM and Greening Australia
